Laboratory Animals - 2nd Edition

Species in Research.

Approximately 95 percent of all laboratory animals are mice and rats. Easily housed and bred, short lived (2-3 years), small, and relatively inexpensive, these rodents have become the animal model of choice for modern medical and scientific researchers. [Click here for more information.](#)

Animal testing, also
known as animal
experimentation, animal
research and in vivo
testing, is the use of
non-human animals in
experiments that seek to
control the variables
that affect the behavior
or biological system
under study. This
approach can be
contrasted with field***

studies in which animals are observed in their natural environments or habitats.
